

CLINICAL CASE**SIMPLIFIED POSTERIOR
RESTORATION PROCEDURE
ELIMINATING SHADE SELECTION****WITH CLEARFIL MAJESTY™ ES-2 Universal**

Case by Dr Piotr Marchewka

Efficiency is an important factor when it comes to restoring posterior cavities with resin composite. It may be achieved by selecting a material that eliminates the need for shade selection and by the use of simplified layering techniques, for example. In the clinical case below, a maxillary first molar and second premolar were restored with CLEARFIL MAJESTY™ ES-2 Universal (U) using the single-shade technique.

**Fig. 1.**

Initial situation. Caries lesions are detected on the occlusal and palatal surfaces of the first molar, and in the distal aspect of the second premolar. Rubber dam was placed for moisture control.

**Fig. 2.**

Appearance of the teeth following caries removal, selective etching of the enamel, and application of CLEARFIL™ SE BOND 2.

Fig. 3.
Sectional matrix in place. It is used to facilitate the creation of a proper interproximal contact.
